An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Garth Vivier, Reg. No. 57313 on September 30, 2009.

The application has been amended as follows:

As discussed please amend page 4 of the specification as follows:

OTHER APPLICATION CROSS-RELATED APPLICATIONS

The patent application titled "ESTIMATING EQUIVALENT BANDWIDTH CAPACITY FOR A NETWORK TRANSPORT DEVICE USING ON-LINE MEASUREMENTS" by Man Yip, Madhav Marathe, and David Hughes, filed on February 2, 2000, having Serial No. **09/496,520, now Patent 6,891,798**, assigned to the same assignee of this patent application, is hereby incorporated by reference in its entirety.

Please amend page 8 of the specification as follows:

programs or data. The mass storage device 150 provides a mechanism to read machine-readable media. When implemented in software, the elements of the present invention are essentially the code segments to perform the necessary tasks. The program or code segments can be stored in a processor readable medium ~~or transmitted by a computer data signal embodied in a carrier wave, or a signal modulated by a carrier, over a transmission medium~~. The "processor readable medium" may include any medium that can store or transfer information. Examples of the processor readable medium include an electronic circuit, a semiconductor memory device, a ROM, a flash memory, an erasable ROM (EROM), a floppy diskette, a compact disk CD-ROM, an optical disk, a hard disk, ~~a fiber optic medium, a radio frequency (RF) link~~, etc. The computer data signal may include any signal that can propagate over a transmission medium such as electronic network channels, optical fibers, air, electromagnetic, RF links, etc. The code segments may be downloaded via computer networks such as the Internet, Intranet, etc.

Please amend the following claims:

1. (Currently Amended) An apparatus to control connection admission for a connection request in a network, the apparatus comprising:

- a first estimator to estimate an equivalent cell rate (ECR) based on description of the connection request, the description including a booking factor;

- a second estimator to estimate a measured utilization factor for admitted

connections in the network using measurements of data streams arriving at queues and the booking factor; and

a processor-based controller coupled to the first and second estimators to generate an admission decision for the connection request comprising:

an addition request processor to generate the admission decision based on a request resource equal to a product of the ECR and the booking factor, and a resource allocation rule using a hierarchical resource organization, and a resource updater to update a resource reservation using the ECR, the booking factor, and the estimated measured utilization factor.

13. (Currently Amended) A method to control connection admission for a connection request in a network, the method comprising:

estimating an equivalent cell rate (ECR) based on description of the connection request, the description including a booking factor;
estimating a measured utilization factor for admitted connections in the network using measurements of data streams arriving at queues and the booking factor; and
using one or more processors, generating an admission decision for the connection request comprising:

generating the admission decision based on a request resource equal to a product of the ECR and the booking factor, and a resource allocation rule using a hierarchical resource organization, and

updating a resource reservation using the ECR, the booking factor, and the estimated measured utilization factor.

49. (Currently Amended) An apparatus for controlling connection admission for a connection request in a network, comprising:

means for estimating an equivalent cell rate (ECR) based on description of the connection request, the description including a booking factor;

means for estimating a measured utilization factor for admitted connections in the network using measurements of data streams arriving at queues and the booking factor; and

means for generating, using one or more processors, an admission decision for the connection request comprising:

means for generating the admission decision based on a request resource equal to a product of the ECR and the booking factor and a resource

allocation rule using a hierarchical resource organization, and means for updating a resource reservation using the ECR, the booking factor, and the estimated measured utilization factor.
